MOCK: Targeted Medicine Plus Chemotherapy for HER2-Positive Breast Cancer

> **For education, not medical advice.**

Study at a glance

A Phase 2 study, now recruiting, for people ages 18 and older with Breast Cancer and HER2-Positive Breast Cancer. Run by Example Cancer Center (MOCK) at 2 sites (nearest: Springfield, IL — 12 mi).

Status: Now recruiting | Phase: Phase 2 | Ages: ages 18 and older | Who: All sexes | Planned size: 120 people | Sites: 2 | Nearest site: Springfield, IL — 12 mi | Sponsor: Example Cancer Center (MOCK)

What this study is testing

✓ Checked against the original

⚙ Simplified by a computer model and checked against the original wording. Always check the original.

Reading level: grade 14.2 → grade 8.1

Researchers are comparing a new targeted medicine added to standard chemotherapy with standard chemotherapy alone in people with HER2-positive breast cancer at Stage II or Stage III. Treatment lasts about 1 year, with scans and blood tests every 3 months.

What they're looking for

- Adults aged 18 years or older [⚙ simplified]
- HER2-positive breast cancer, Stage II or Stage III [⚙ simplified]
- ECOG performance status 0 or 1 (able to do most daily activities) [⚙ simplified]

Who can't join

- Prior treatment with a HER2-targeted therapy [⚙ simplified]
- Heart function (left ventricular ejection fraction) below 50% [⚙ simplified]
- Pregnant or breastfeeding [⚙ simplified]

Questions to ask your doctor

- Is this study a good fit to talk about for my type and stage of cancer?
- What would happen to me during the study, and how often would I need to visit?
- What are the possible benefits and risks compared with my other options?
- Will I have to pay for any part of the study, such as tests, travel, or medicines?
- How would joining affect my current treatment and my regular doctors?
- Who can I contact with questions, and can I leave the study at any time?
