What this study is testing

✓ Checked against the original

Reading level: grade 14.2 → grade 8.1

Researchers are comparing a new targeted medicine added to standard chemotherapy with standard chemotherapy alone in people with HER2-positive breast cancer at Stage II or Stage III. Treatment lasts about 1 year, with scans and blood tests every 3 months.

Who can join

You may be able to join if

- Adults aged 18 years or older
- HER2-positive breast cancer, Stage II or Stage III
- ECOG performance status 0 or 1 (able to do most daily activities)

You may not be able to join if

- Prior treatment with a HER2-targeted therapy
- Heart function (left ventricular ejection fraction) below 50%
- Pregnant or breastfeeding

Questions to ask your doctor

- Is this study a good fit to talk about for my type and stage of cancer?
- What would happen to me during the study, and how often would I need to visit?
- What are the possible benefits and risks compared with my other options?
- Will I have to pay for any part of the study, such as tests, travel, or medicines?
- How would joining affect my current treatment and my regular doctors?
- Who can I contact with questions, and can I leave the study at any time?
